EDUCATION

Boston University — Faculty of Computing & Data Sciences, Questrom School of Business Boston, MA
Bachelor of Science in Data Science and Business Administration Expected May 2028
GPA: 3.76 | Activities: Korean Student Association, Private Tutor, Baseball Coach and Umpire

SKILLS & INTERESTS

Technical: Python, SQL, R, Git, PyTorch, scikit-learn, NumPy, Pandas, Matplotlib, Seaborn | LangChain, FastAPI, Azure
Languages & Interests: English (fluent), Korean (fluent) | Baseball, Photography, Whitney Houston, Cooking, Teaching

PROFESSIONAL EXPERIENCE

- Skyworks Solutions** Irvine, CA
AI/ML Intern — IT AI Enablement Team May 2026 – Present
- Built an AI agent with LangChain and LangGraph to automate the chip-component workflow: it ingests part data from Cadence, uses an LLM to recognize each part despite inconsistent naming, stores results in structured CSV, and converts them into a hierarchical JSON representation for downstream use.
 - Contributed to AI-driven design tooling that improved the team's semiconductor chip design efficiency by ~12%, reducing manual effort in component lookup and data preparation.
 - Developed and deployed LLM-powered applications and agentic systems on Azure (AI Search, Blob Storage, Key Vault), integrating with internal platforms to make agents available to employees across the organization.
- Boston University** Boston, MA
Resident Assistant August 2024 – Present
- Foster an inclusive residential community of 40+ students by facilitating programming, conflict resolution, and peer support initiatives.
 - Coordinate campus-wide events and mentorship programs in collaboration with residential life staff to improve student retention and satisfaction.
- Machiavelle X Store** Santa Ana, CA
E-Commerce Startup Co-Founder December 2023 – February 2024
- Co-founded and launched an e-commerce apparel store on Shopify, overseeing storefront design, product listings, and pricing strategy.
 - Generated four-figure revenue within two months by executing targeted online marketing campaigns and iterating rapidly on ad performance metrics.

PROJECTS

- MLB All-Star Prediction Model** December 2024 – January 2026
Python, scikit-learn, PyTorch, pybaseball, Pandas
- Collected and cleaned a multi-season dataset (2007–2024) of 2,784 qualified MLB hitter-seasons, engineering a sabermetric feature set including wOBA, ISO, WAR, BB%, K%, OBP, and defensive value.
 - Trained a Random Forest Classifier achieving 0.917 ROC-AUC and 94% test accuracy despite extreme class imbalance, applying stratified 5-fold cross-validation and precision-recall threshold optimization.
- MLB Player Performance Chatbot** 2026
Python, pybaseball, SQLite, FAISS, LlamaIndex, Anthropic API
- Fetches and stores multi-season MLB player stats using pybaseball into a local SQLite database, then embeds player summaries into a FAISS vector store for semantic retrieval.
 - Built a LlamaIndex RAG pipeline enabling natural-language queries over player data, allowing questions like player comparisons and recent performance trends to be answered via an LLM.
- Ames Housing Price Prediction** November 2025
R, tidyverse, ggplot2, broom
- Engineered 19 ordinal features across 2,930 observations and built and compared 4 linear regression models; improved R^2 from 0.53 to 0.88 by adding neighborhood fixed effects, interaction terms, and basement sq. footage.
 - Applied a log transformation to correct heteroscedasticity; selected the final model (adjusted $R^2 = 0.855$) through AIC comparison validated with residual and Q-Q diagnostic plots.
- Congressional App Challenge — 3rd Place, U.S. District** Irvine, CA | 2022–2023
- Designed and built a mock web platform enabling athletes to connect and compete across sports, with an HTML/CSS front-end
 - Won Third Place in the U.S Congressional App Challenge district competition, recognized for technical execution and innovative product design
